Country Name	The Draiget for HIV and AIDS Dravention through Education (HADE Draiget)			
Republic of Ghana	The Project for HIV and AIDS Prevention through Education (HAPE Project)			
I Project Outline				
Background	e Republic of Ghana (Ghana), HIV prevalence for the aged between 15 to 24 years old had been easing from 1.9% to 2.6% for the period of the year 2003 to 2007. It had been the major issues for na to prevent new infection among the youth. The Ghana AIDS Commission (GAC) which was blished under the direct supervision of the President had been taking the lead to tackle HIV and S, promoting multi-sectorial approaches, as there was a concern that the proper knowledge on AIDS had not been spread among people. According to the Ghana Population and Health Survey 3), the level of awareness for the people on HIV/AIDS is quite high, showing 99% for men and 98% vomen. However, only 38% of those men and women together have the proper knowledge on AIDS. In case of the Ashanti region and Eastern region, which have marked the highest HIV alence of the country, where the facilities of VCT/PMTCT (*) have been well established; only few ole have voluntarily used those facilities. Under these circumstances, it has become imperative to eminate the proper information and knowledge on HIV/AIDS • VCT/PMCT, and to improve the essibilities of social services that will promote to raise awareness and to change behavior of those ng generation toward HIV/AIDS.			
Objectives of the Project	<ol> <li>VCT: Voluntary counseling and testing PMTCT: Prevention of Mother to Child Transmission</li> <li>Overall Goal : High risk behaviours among the youth in the target districts are reduced.</li> <li>Project Purpose : The awareness about the risk of infecting HIV and STIs among the youth (Aged 10 -24) and the social environment to reduce youth high risk behaviours are created in the target communities.</li> <li>Logical flow of how the project responses to development issues<sup>1</sup> : ①Dissemination of knowledge on HIV /AIDS prevention through mass media, ②Promotion of service utilization on HIV/AIDS Prevention, ③Through the establishment of proper mechanism to prevent HIV/AIDS involving the various stakeholders such as schools and communities, young generations will become fully aware of risk on HIV/AIDS and the social environment to promote them to avoid high risk behaviors are created. As a result, high risk behaviors on HIV/AIDS are reduced among youth in the target communities.</li> </ol>			
Project Information	<ol> <li>Project site : Accra city, Eastern region (one city and five districts), Ashanti region (one city and three districts)</li> <li>Main activities : (following activities were carried out by local NGO "PPAG" with the Japanese assistance)         <ul> <li>Development of education materials on BCC/IEC(*)manuals and guidelines, (2) implementation of awareness raising activities using dramas and films, (3) information dissemination on medical services, such as VCT/PMTCT services, (4) holding PMC meetings at the target communities, (5) implementation of training for peer education, (6) net-workings among various stakeholders, (7) HIV/AIDS prevention through education for school teachers and related stakeholders, (8) implementation of trainings, (9) implementation of trainings on administrators (those in charge at DAs)</li> <li>PPAG: Planned Parenthood Association of Ghana, BCC: Behavior Change Communication / IEC: Information, Education and Communication</li></ul></li></ol>			
Project Period	October 2005 – September 2009 Project Cost 297 million yen			
Implementing Agency	Ghana AIDS Commission (GAC)、District Assembly (DA)			
Cooperation Agency in Japan	None			
Related Projects	<ul> <li>Japan's cooperation :</li> <li>Japan Overseas Cooperation Volunteers : Dispatch of 27 JOCVs to the target regions in the field of communicable disease control (2005~2009)</li> <li>Provision of Medical Equipment (equipment for HIV AIDS • Blood Test) amounting for 78.8 million yen(2004~2009)</li> <li>Group Training Course on HIV AIDS and Reproductive Health in Japan : 7 persons (2007- 2009)</li> <li>Collaboration with Sony Corporation (June to July in 2009) : BCC/IEC related events for youth and community people were carried out using equipment provided by Sony</li> </ul>			

 $^1\,$  Reviewed at the time of the ex-post evaluation.

Other donors' cooperation :
WHO: Care& Support,
•UNAIDS: Technical assistance (coordination of UN agencies and other donors in the field of HIV/AIDS)
World Bank : Ghana Multi- Sectoral HIV/AIDS Program
UNICEF: Formulation and implementation of PMTCT, OVC
USAID: Assistance toward NGOs who carry out the preventive care and supports for HIV/AIDS
Netherland · Establishment of VCT/PMTCT center

# I Result of the Evaluation

### 1 Relevance

This project has been highly relevant with Ghanaian's development policy "(e.g. the importance of HIV and AIDS Prevention through Education as set in the National HIV&AIDS Strategic Plan (2011-2015) and National HIV, AIDS STI Policy (2013)), development needs, "(e.g. assistance toward youth on the prevention of HIV AIDS)", as well as Japan's ODA policy "Japan's Country Assistance Program for Ghana (2005)", at the time of both ex-ante evaluation and project completion.

# Therefore, relevance of this project is high.

## 2 Effectiveness/Impact

This project focuses on promoting the awareness raised on the risk of HIV/AIDS among youth of target communities, and the reduction of their high risk behaviors. The achievement level of the project purpose was examined by four indicators as described in the table below<sup>2</sup>.

According to the interviews with the field officers of PPAG and those officers in charge of HIV/AIDS at District Assemblies (DAs) during the field study, it was confirmed that the indicator 1) had been already achieved at the terminal evaluation and has been further progressed after the project completion. No relevant data was available for the indicator 2), however, it is assumed that the number of youth who has referred to the health services has been increasing as the number of CHPS (Community-Based Health Planning & Services) facilities<sup>3</sup> was increased after the initiation of the project. As for indicator 3), it is also readily assumed that the number of youth who has positive attitude toward PLHIV has increased as the awareness raising activities at the target hospitals have been continued. At the Bekwai District Hospital, the awareness raising activities, which focuses on how to use condoms, how to deal with prejudice against HIV/AIDS and STDs and discourse on health issues, have been carried out every week with the participants of 100 to 200. As for the indicator 4), the mechanisms for youth to avoid high risk behavior has been somewhat established. Currently, the GAC at the central level coordinates and monitors the progress of activities for the youth to avoid high risk behaviors. And the District Sustainable Plan, which was developed at the terminal evaluation for the purpose of continuing the activities, has now been carried out and vehicles procured by the project to the DAs have been well utilized to implement activities. (In some area, the District Sustainable Plan has not been implemented due to the budget shortage). At the New Juaben city, the group discussion or film showings have been continuously carried out by field officers in collaboration with coordinators of SHED (School Health Education Program). There are, however, some concerns that film showings and the renewal of films have been suspended as some members of newly formed drama group left for Accra.

The achievement level of Overall Goal is examined by four indicators as described in the table. As for the indicator 1), the progress has already shown at the time of project completion. The HIV prevalence for New Juaben city has decreased from 6.4% in 2005 to 5.8% at the project completion in 2009 and to 3.0% at the ex-ante evaluation in 2012. As for indicator 2) to 4), no relevant data were available at the time of ex-ante evaluation, but some progresses have been confirmed at the project completion as described in the table.

In summary, although the achievement levels at the ex-ante evaluation have not been fully examined as some data were not available, the project has partially achieved its objectives as the awareness about the risk of infecting HIV and STIs among the youth of target communities have increased to some extent, and the social environment which promotes the youth to avoid the high risk behaviors has been gradually created.

Therefore, the effectiveness /impact of the project is fair.

Aim	Indicators	Results

Achievement of Project Purpose and Overall Goal

<sup>&</sup>lt;sup>2</sup> The field study at the ex-ante evaluation was only targeted to one city (New Juaben City) and one district (Bekwai District) as a sample. Therefore, the result of the field study does not represent the whole population.

<sup>&</sup>lt;sup>3</sup> This means the Community- Based Health Planning & Services provided by the field health professionals stationed at DAs who can also provide the VCT services.

<sup>&</sup>lt;sup>4</sup> According to those in charge of Bekwai DA, the reason of slight decrease in 2012 is due to that not all of relevant data were reflected to these figures as some quarterly report were not submitted by the deadline.

communities.       2) Number of youth who has <u>Protect completion (%) Mostly achieved based on the quartery report.</u> referred to heath services is <u>Excost evaluation</u> . the activities under the HIV/AIDS prevention through education, while NGOs						
and DAs have carried out grass-route activities according to the national plan						
and to report the progress to GAS. As for the awareness raising activities,						

Minibus procured by the project (New Jouben city)

As for the technical aspects, those in charge of HIV/AIDS at DAs and NGOs have sufficiently acquired the knowledge and skills through project activities and have now been able to conduct the trainings on BCC/IEC by themselves. Those knowledge and skills acquired through project activities have been introduced to other areas through the Regional Coordination Committee (RCC). The educational materials on BCC/IEC, manuals, guideline and BCC strategic manuals have still been utilized at schools and DAs. There are some concerns that film showings and the renewal of films have been suspended as some members of newly formed drama group left for Accra. However, there have been no problems reported after the project completion. As for the financial aspect, the budget of HIV/AIDS awareness raised at Bekwai District has increased, such that GHC 1,678 in 2010 to GHC 2,560 in 2013. While, in the New Jouben City, the budget of same

GES (Ghana health services) has now collaborated with junior high schools.

kind has decreased from GHC 3,840 to GHC 965. Due to the insufficient budget, some of activities under the Sustainable District Plan have not been carried out after the project completion. As no external funds from other donors have utilized, some attempts have been made to generate the fuel cost by squeezing the routine activities when the activities have become stagnant. The proportion of budget allocation of HIV/AIDS activities in the total budget of DAs has been reduced from 1% to 0.5% and the educational activities on HIV/AIDS have been downscaled. It is presumed that the prospect of financial sustainability is somewhat uncertain. Therefore, the sustainability of this project is fair. %GHC :Ghana Cedi (local currency of Ghana) 1 GHC=US\$0.44 (November in 2013)

5 Summary of the Evaluation

This project has partially achieved its objectives to create awareness about the risk of infecting HIV and STIs and the social environment to reduce youth high risk behaviours in the target communities. According to the field study of selected one city and one districts, the awareness of youth about the said risk has been increased to some extent, and social environment to encourage the risk-adverse behaviour has gradually been created. However, the achievement level is somewhat limited for the continuing mechanism to sustain the effect of the project. As for the sustainability, the concern was pointed out in the financial aspects. As for the efficiency, the project cost was exceeded the plan.

In light of the above, the evaluation of the project is partially satisfactory.

# III Recommendations & Lessons Learned

### Recommendations for Implementation agency :

Currently, proportion of budget allocation of HIV/AIDS activities from DAs has been reduced from 1% to 0.5% and the educational activities on HIV/AIDS has been downscaled which might affect the achievement. Therefore, it is necessary for DAs to effectively secure the budget allocation from District Assembly Common Fund managed by the Common Fund Administrator. For that, DAs should prepare the effective proposal in order to obtain the funds to implement activities of HIV/AIDS prevention through education.

# Lessons learned for JICA :

Some activities of the project were contracted out to the local NGO, PPAG. After the project completion, in New Juaben city, which was one of the target areas of the field study of ex-post evaluation, the project officer of PPAG has continued activities as the government staff under DA. While, in Bekwai District, which was also the target area of the field study of ex-post evaluation, the project officer of PPAG moved to other NGO and his successor of government staff under DA was also transferred to other position. Therefore, activities under this DA have been carried out by the newly assigned officer. Sustainability of the project could have been much higher if project activities had been well integrated into daily routine as well as the capacity development of government officer on HIV had effectively been carried out during the project period.

Therefore, in order to sustain the effect by the project in the similar project, it is recommended that the project activities should be effectively incorporated into the routine work during the project period.
